59069 Hamm**Approval number:** DE 05 915 0007 13**Product features:**

Canina® Canhydrox GAG has been developed particularly for large and heavy breeds. It is a high-quality supply for the connective tissue, the joints, the bones, for the ligaments and sinews as well as

Canina® pharma GmbH • Postfach 7065 • D-59028 Hamm

for the teeth and the cartilage. The motion apparatus of all age animals, young, mature or older, truly benefit from this "allrounder" supplement.

- With dicalcium phosphate : An organic material, which is contained in the bones to 50% and in the teeth to 90%. It supports the callus formation, the elastic firmness of bones, the development of firm adamantine, the development of straight, axle aligned extremities (knock-knees or bow-legs), overextensions, loose joints; it can prevent the degeneration of the bone substance of older dogs and supports the skeleton system overall.
- With green-lipped mussel powder:: For the supply of the connective tissue and the joint cartilage with glycosaminoglycane (GAG); the joint buffer function is increased by the attraction of water of the large GAG molecules. The naturally contained omega fatty acids support the musculoskeletal system and the bone metabolism.
- Vitamin C: strengthens the connective tissue and supports a strong gum.
- Silicea: supports the structures of the connective tissue like ligaments, tendons and claws.
- Vitamin E and selenium: as cell protection factor for the degradation of cytotoxic metabolites (antioxidants).

Canina® CANHYDROX GAG tablets for problem cases such as musculoskeletal disorders.

Feeding recommendations per pet and day:

Young dogs from the 8th week:

- | | |
|----------------------------------|---|
| Preventive: | 2 tablets per 10 kg body weight up to the 15th month of life (max. 16 tablets) |
| In case of deformed extremities: | 4 tablets per 10 kg body weight (max. 16 tablets), at least for 4 months, then 2 tablets per 10 kg body weight will be sufficient |

Older dog: 4 tablets per 10 kg body weight. (max. 16 tablets)

Performance dogs: 2 tablets per 10 kg body weight during the performance phase.

After bone fractures: 4 tablets per 10 kg body weight (max. 16 tablets) during the healing process.

The given feeding recommendation must not be exceeded!

Storage recommendations:

Store at room temperature and in a dry place.
